

PANIC BREAK OUT

SLIDING
DOORS

FRAMED DOORS PROFILE

- Ideal for high-traffic sites and for the rapid evacuation of people
- Provides maximum clear opening

SUITABLE SOLUTION FOR EMERGENCY ESCAPE ROUTES in HIGH-TRAFFIC SITES

Sliding doors with break-out function are used on emergency escape routes. In an emergency, the sliding door opens as a swing door

The PANIC BREAK OUT system allows the door to be fully opened in the evacuation direction through mechanical operation (pushing). This ensures a maximum clear opening for evacuation in the event of an emergency.

This model is highly recommended for entrances with heavy foot traffic where rapid evacuation may be required.

The PANIC BREAK OUT model is available in two options:

1. Full panic break-out system: swing opening of all leaves, both fixed and moving.
2. Partial panic system: swing opening of the moving leaves only, which are installed on the outer side.

The framed profiles are identical to those of the COMPACT SENDO model.

The closing latches on the moving leaves can override the anti-panic system, allowing the door to be locked when the site is closed.
