

# PANIC BREAK OUT

## PROFILE

### Framed Doors

---

SLIDING  
DOORS

#### **Suitable solution for emergency escape routes on high-traffic sites.**

The sliding doors with break out function are used on emergency escape routes. The sliding door opens as a swing door in emergencies.

The PANIC BREAK OUT system fitting allows the door to be opened completely in evacuation direction by mechanical operation (pushing).

There is therefore a maximum sized gap for exit in the event of emergency.

This model is highly recommended for any kind of entrance with a large flow of traffic which requires people to be evacuated quickly.

The PANIC BREAK OUT model has two options:

1. Full panic break out system with a swing opening of all leaves, both fixed and moving.
2. Partial panic system with a swing opening of the moving leaves, which are installed on the outer side.

The framed profiles are the same as the model COMPACT SENDO.

The closing latches on the moving leaves can be used to override the anti-panic system, allowing the door to be locked when the site is closed.

#### **IDEAL FOR HIGH-TRAFFIC SITES AND TO EVACUATE PEOPLE QUICKLY**

---

#### **MAXIMUM CLEAR OPENING**

---

#### **SUITABLE FOR THE OPERATORS ERTAIN AND GLOBAL**
