- Easy installation

SOLUTION WITH DESIGN AND HIGH STRENGTH

Ideal profile for outdoor use, combining a discreet, highly resistant design with a premium finish. It is a robust profile with a lightweight aesthetic.

The ECO32 model has been designed in accordance with safety standards EN 16005 and EN 16361 (safety distances).

It is a 32 mm-wide framed profile that accommodates single glazing up to 12 mm thick, or double glazing of 22 mm or 24 mm thickness.

The frames are assembled at 90° on an end-to-end joint, using sheet metal screws on a reinforcement wedge. Side U-profiles are included to reduce slamming and compensate for wall imperfections.

Overlap is achieved using an overlap profile on the fixed door leaves combined with double-facing rubber, ensuring improved sealing. The closing rubber features a double protrusion to ensure a more secure closure. In installations with only one moving leaf, a frame profile is fixed to the wall and fitted with a weatherstrip for improved sealing.

This profile, in its Security and Multilock versions, allows the installation of mechanical manual locks (single- and multi-point) embedded within the closing profiles.
