

This quick guide is a summary of the complete installation manual. The manual contains safety warnings and other explanations which must be taken into account. The most recent version of this guide and the installation manual are available at the "Downloads" section on Erreka's website: <http://www.erreka-automation.com>

WARNING

The options and functions described in this guide apply for the firmware version indicated on the circuit. The firmware, as part of a process of continuous improvement, is subject to new functionalities or upgrades being included as a result of new versions which are not necessarily compatible with previous ones. For this reason, some options or functions may differ or be unavailable if your firmware is older than shown in this guide.

Elements of the complete installation

Electrical wiring

- A: Main power supply
- B/E: Flashing light with antenna
- C: Photocells (Tx / Rx)
- D: Pushbutton/wall key

Assembly levels

Install the rack at a height between 75 and 95 mm. 90 mm is recommended as the reference height.

Unlocking

Unlocking for manual operation:

- Insert the key (1) and turn clockwise 180° without forcing it: the rack drive pinion will come down from its operating position, releasing the rack.

Motorised operation locking:

- Insert the key and turn it anti-clockwise 180° as far as it will go. The pinion will return to its work position, in contact with the rack.
- Activate a key device in order for the gate to carry out a "reset".

General connections

⚠ **Disconnect the power supply before connecting or disconnecting any component.**

DL13 24Vac power supply
DL36 5Vdc power supply
DL37 Closing relay activated
DL38 Opening relay activated

⚠ The A.T., A.P., SG.C, SG.A and STOP devices must be voltage-free in order to prevent any damage to the control board.

P259T

Display indications

D1 and D2:

CL (static)	Gate closed
CL (flashing)	Gate closing
OP (static)	Gate open
OP (flashing)	Gate opening
PC (flashing)	Pedestrian door closing
PO (static)	Pedestrian door open
PO (flashing)	Pedestrian door opening
XX (countdown)	Gate on standby
StOP	Operator unlocked
PR (static)	Pause (operation not complete)
rS (flashing)	Gate searching for close position (reset)

D3 and D4:

C4	Opening safety device activated
C5	Closing safety device activated
E!	Encoder motor shutdown
F!	Force limit exceeded
bR (static)	Battery working
bR (flashing)	Battery voltage too low (the board does not carry out any operations)
Ftno	Photocells defective (testing)

Turning direction change and check (C I)

☞ This operation is only necessary if the operator opens the leaf instead of closing it when making a reset (r5).

Total opening radio code programming P I (with RSD receiver only, C80 I)

☞ If a receiver other than RSD is used, see the corresponding instructions.

☞ Select the option C80 I (RSD receiver) before starting programming.

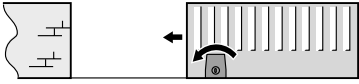

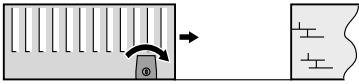

Pedestrian opening radio code programming, P2 (with RSD receiver only, C80 I)

☞ This procedure is the same as for total opening, but using parameter P2 instead of P I.

Open/close programming (P3)

Complete programming chart

D1	D2	Parameter	D3	D4	Preset option	Options or values
C	1	Motor turning direction	0	1	x	
			0	2		
	4	Opening safety device (photocell or strip)	0	0	x	Device not installed
			1	0		Device without testing
			1	1		Device with testing
	5	Closing safety device (photocell or strip) Closing photocell with C520 or C521, also prevents the start of gate opening	0	0	x	Device not installed
			1	0		Device without testing
			1	1		Device with testing
			2	0		Device without testing
	8	Radio receiver	0	1		RSD card (non-decoding)
0			2	x	Twin-channel decoder card	
P	1	Total opening radio code programming	0	n		
	2	Pedestrian opening radio code programming	0	n		
	3	Gate travel programming	0	n		
F	1	Functioning mode	0	1		Automatic
			0	2	x	Step-by-step
	2	Standby in automatic mode	0...5	0...9	15	59 = 59 sec.; 25 = 2 min. 50 sec, etc
	3	Pedestrian opening	0	0	x	Pedestrian opening is not carried out
			1	0		10% of total opening
			2	0		20% of total opening
			3	0		30% of total opening
			4	0		40% of total opening
5	0		50% of total opening			
R	0	Flashing light	0	1	x	No pre-warning
			0	2		With pre-warning
	1	Garage light time	0...5	0...9	03	59 = 59 secs; 25 = 2 min. 50 secs, etc
	2	Gate speed	0	1...5	03	01: minimum speed; 05: maximum speed
	3	Slow down speed	0	1...5	03	01: minimum speed; 05: maximum speed
	4	Slowdown distance	0	0...5	03	00: minimum distance; 05: maximum distance
	5	Reverse after closing (to offset the expansion of the gate) R50x: stops in selected position without making contact R51x: makes contact and reverses back to the selected position	0...1	0...9	04	x0: no reverse; x9: maximum reverse
	6	Maximum force	0...1	0...9	08	01: minimum force; 10: maximum force
	7	Closing photocell used during standby (in automatic mode only)	0	1		Immediate close
			0	2	x	Restart standby time
			0	3		Has no effect
	8	Pushbutton operation during standby (in automatic mode only)	0	1		Immediate close
			0	2	x	Restart standby time
			0	3		Has no effect
	9	Opening mode	0	1	x	Opening in accordance with the mode selected in the main functions (F)
0			2		Collective opening (the control board does not obey the key commands during opening)	
0			3		Step-by-step opening (the gate stops if a key device is activated during opening. The gate closes when operated again)	
n	1	Operations carried out	X	X		Indicates the hundreds of cycles completed (for example, 68 indicates 6,800 cycles completed)
